

GEDA SH

The Rack & Pinion Elevator for the offshore industry

GEDA's state of the art Industrial Rack and Pinion Elevator systems have been specifically designed for industrial use, including the offshore and marine industry, where there is a growing need for safe, reliable vertical transportation of personnel and material.

GEDA can offer several elevator options to meet the service requirements and harsh environments of the offshore industry including: Living Quarters, Platform Topsides, Floating Production Storage Offloading Systems (FPSO), Semi-Submersibles, Tension Leg Platforms (TLP), Drilling Derricks, and Jackups.

You have the choice between several platform dimensions and capacities ranging from 300 kg – 2700 kg and lifting speeds up to 60 m/min. We can also offer optional explosion proof duty service designed to meet your hazardous classification needs, as well as various equipment finishes including: stainless steel, aluminium, hot dipped galvanizing, and special marine paint systems.

GEDA meets industry codes and can be certified to meet ANSI A17.1, EN-81, IEC, NEC, ATEX, DNV and ABS. GEDA is ISO 9001:2008 compliance and is a member of the German Engineering Federation (VDMA).
